A lot of improvements have been made to the program's editing tools. I.e., it has lost some of its quirky behaviour. For example, if you used to assign all your Lightroom images to a category, but later removed the category, all your images were lost. That is no longer the case. Can't say I'm a huge fan of the old recovery menu, especially when dealing with documents that have been open for a decade. This was actually my main gripe with the review software for the old 16x device. I've not had to open any files very extensively, so I can't speak to this. It's no secret that photography enthusiasts have long been critical of Adobe for delaying the release of the next version of its immensely popular Photoshop. A recent report from CNET reveals the reason for the delay: Adobe wants to invest in the cloud. With more than 4,500 reviews, including 8 DMUs, the latest Photoshop is "the most comprehensive upgrade to the ubiquitous image-editing software since it was introduced back in 1990," writes Homejoy's latest photoshots . Photoshop will now become part of the Creative Cloud suite available from the website instead of having its own standalone version. To access Photoshop, users will need to download the program as they always have before. They'll be able to install on Mac computers running OS X or Windows and iPads. We gained a subscription to the Creative Cloud which was billed at \$9.99 a month and which allowed us to automatically receive certain updates of certain programs we already had, although that was never counted amongst the regular software updates. After three months I started to feel very tempted to drop them for going to a one-click purchase for which we would pay only \$15.00 for \$49.98 for three years. It was a kind of blackmail; anyway, and at last I did it.
